Document Verification

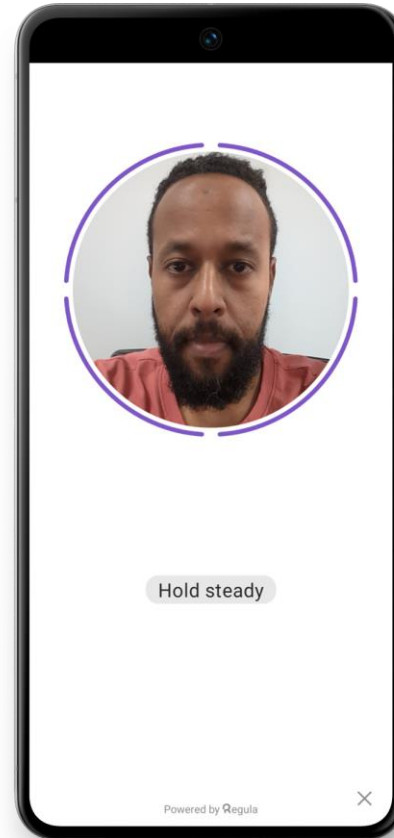

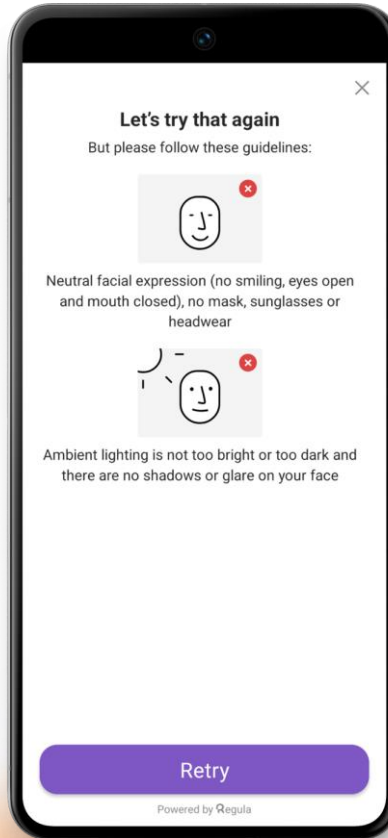

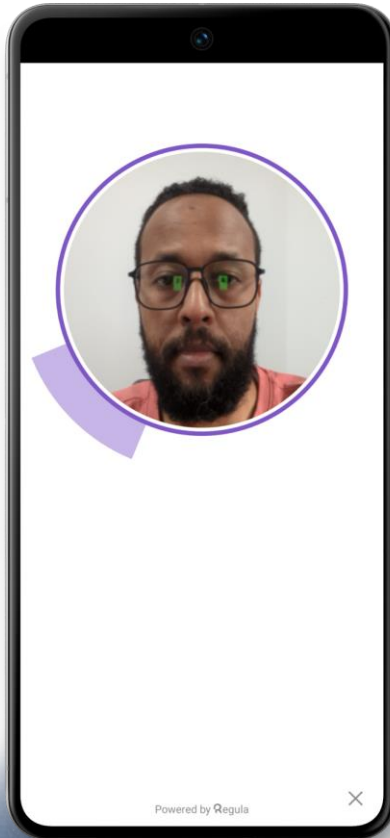

Compromised Submission	Detects if the document submission appears to be compromised or tampered with.
Allowed ID Type	Confirms that the submitted document is of an allowed type (e.g., passport, national ID).
Government ID	Checks the authenticity of the submitted government-issued ID.
Expiration	Verifies that the document is not expired.
MRZ Detected	Checks for the presence of a Machine-Readable Zone (MRZ) on applicable documents, ensuring it is correctly formatted and readable.
Portrait Clarity	Ensures the photo on the document is clear and recognizable.
Portrait	Verifies that the photo on the document matches the user's selfie or other provided photos.
Repeat	Detects if the document has been submitted multiple times or used in previous verifications.
Age Comparison	Compares the date of birth on the document with the user's provided age or other related data.
Double Side	Ensures that both sides of a double-sided document are submitted and consistent with each other.
Electronic Replica	Detects if the submitted document is an electronic copy or scan of an original document.

Facial Recognition Verification

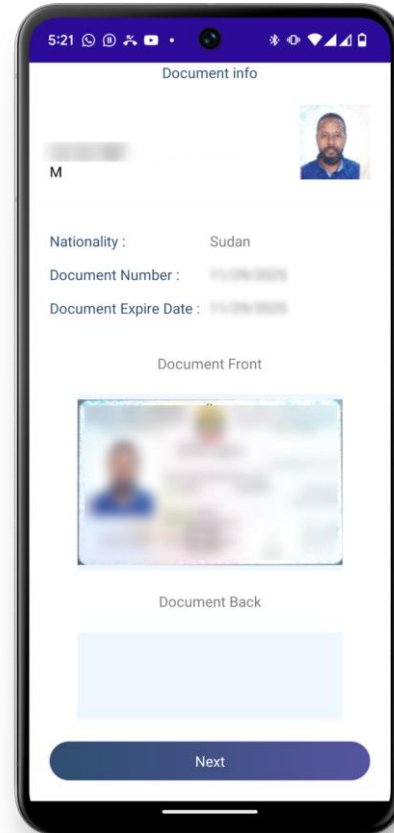

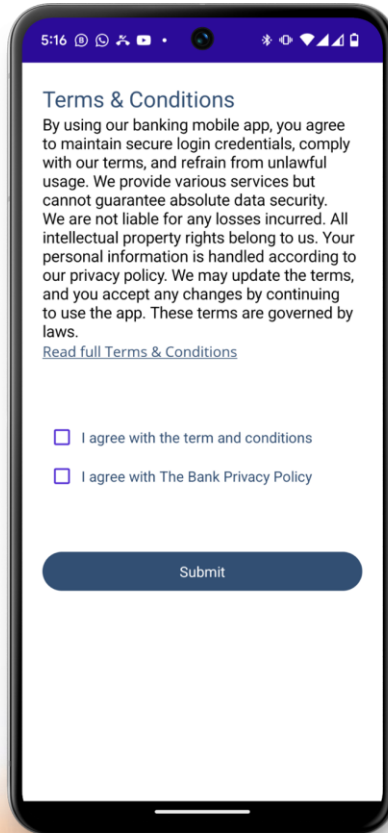

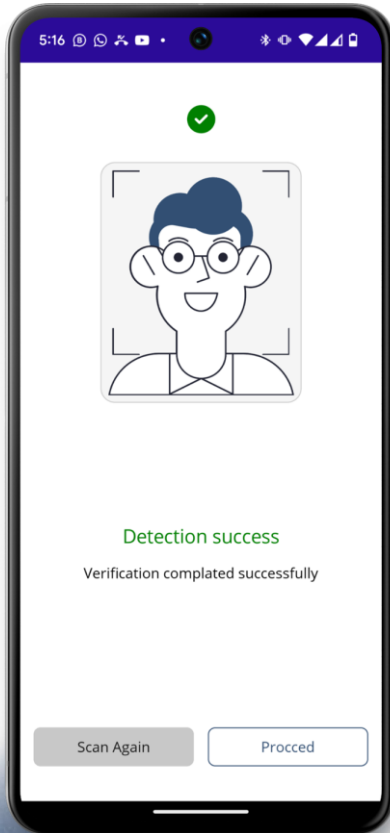

Selfie-to-ID Comparison	Compares the user's selfie with the photo on their uploaded ID to ensure they match.
Pose Position	Verifies that the user is posing correctly for the selfie, ensuring a proper angle and visibility.
Multiple Faces	Detects if there are multiple faces in the selfie and flags for user action if more than one face is detected.
Selfie Liveness Check	Performs liveness detection to confirm that the selfie is taken in real-time and not a photo of a photo.
Glare	Detects glare on the user's face or ID, which can obscure facial features. Users are asked to retake the selfie if glare is detected.
User Action Required	Prompts the user to take corrective actions if certain issues are detected (e.g., poor lighting, multiple faces, face coverings).
Suspicious Entity	Flags any suspicious elements or behaviors detected during the selfie capture process.
Portrait Quality	Assesses the quality of the captured selfie, including clarity, resolution, and focus. Users may be asked to retake the selfie if quality is poor.
Age Comparison	Compares the apparent age in the selfie with the age information provided in the ID.
Face Covering	Detects if the user is wearing any face covering (e.g., masks, hats) that obstructs facial features. Prompts the user to remove the covering.
